The Four Steps of Effective AI Collaboration

A systematic approach to getting maximum value from AI tools

1. DEFINE the Task

Break complex problems into AI−manageable tasks. Identify what you need and what AI can help with.

→ *Task decomposition*

2. PROMPT with Context

Write structured prompts using the seven rules. Include role, context, constraints, and deliverables.

→ *Prompt engineering*

3. ITERATE and Refine

Review AI output critically. Ask follow−up questions. Refine through multiple conversation turns.

→ *Multi−turn dialogue*

4. VALIDATE and Apply

Verify accuracy against standards and expertise. Apply human judgment. Integrate into final work.

→ *Critical evaluation*
